

**Fitness program**

**Upgrades and conversions keep your machine fit for a longer time**

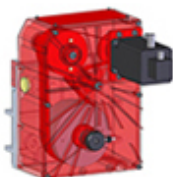

You will certainly appreciate future-oriented, high performance productivity and even more efficient operation. We can offer attractive upgrade and conversion packages with an excellent price/performance ratio for the following machines: Unica, 5040 E, 4040HP-E, 4040HP, Epoca I to Epoca 04 and Era.

Please choose from our comprehensive range:

**New machine software version 7.1**

It can be used on all the above-mentioned machine types and is impressive with its fabric presser with online adjustment, optimised thread break display, current progress display and multi-functional control bar. And you will be pleasantly surprised by further features.

**Drive conversion for Epoca I and Epoca II**

You will be able to benefit from the latest technology and from the following features: no more belt changes, smoother running properties, less maintenance and no unplanned downtimes.

**Fast thread cutting (OFC/FastCut)**

The software upgrade "fast thread cutting" brings the whole Epoca range up to the level of new machines. The tried-and-tested features recommended by our customers mean a productivity increase of over 15% and "FastCut" thread cutting is carried out in less than 10 seconds.

**Shuttle guides with replaceable clip sliding surfaces**

Replacement of all the shuttle guides is no longer needed and you are ideally prepared for any production requirements. The inexpensive clips can be replaced quickly and the optimized material pairing guarantees a long service life.

**Conversion of panel PC 32 bit**

In this way, you will have the latest technology at your disposal, ensuring the greatest possible machine availability and productivity.

**It's well worth acting right away!**

**Interested?**

Then fill in the Fitness Program form and return it to us. We look forward to contacting you and giving you competent, comprehensive advice.

## Saurer 5040 E

### Still very popular and successful

It is undisputedly the most successful 2-level shuttle embroidery machine. The Saurer 5040 E is now fitted with the most efficient elements of the Epoca such as the flexible drive concept on two levels. The 5040 E is a very solid machine which is easy to operate. It is especially suitable for the processing of inexpensive embroidery material and for markets with problematic production conditions.

Interested? We shall be pleased to advise you. The Saurer 5040 E is still the most economical solution in certain production segments.

## Saurer sequins and soutache

### New sequins and soutache system

The new, patented sequins and soutache system for Pentacut machines, with a lift-off function, has started successfully. This world innovation brings you countless advantages:

- Lift-off function for easier operation and a clear view of the embroidery area
- Flexible repeats can be embroidered - even 4/4 repeats
- High speed thanks to full integration into the Saurer system
- Substantial productivity increase

Our sales team will be happy to give you details of the new sequins and soutache system.

## Saurer WinPro

### Oerlikon Saurer successful with WinPro

After its successful market introduction in Europe, our revolutionary long staple spinning system WinPro will now be distributed worldwide. WinPro sets standards in production, quality and economic efficiency. Customers benefit from advantages such as production speeds of up to 250 m/min, unique flexibility by manufacturing 2-, 3- and 4-fold yarns, a drastic reduction in the throughput times, 80% less work in progress and massively reduced batch change times. Energy saving is becoming more and more important, and with 70% energy reduction WinPro is making a decisive contribution.

WinPro – a further chapter in our more than 150 year-old success story.

## Colour fastness

### Colour fastness – a quality feature of high-class embroidery

The high demands made nowadays on the top quality sector, especially in the lingerie industry, represent a great challenge for any manufacturer. The adherence to colour fastness poses great problems for many an embroiderer. Because nowhere else is such a large variety of materials processed in combination and finished in so many variations as in the embroidery industry. This very variety, which makes embroidery so special and unique, plus cost pressure, is often the reason for colour fastness problems.

Due to the complexity, great understanding is required of the interactions and the mutual dependencies, in order to improve the quality successfully.
